

NGO - Humanitarian Agency

NGO Chooses SkyVision to Manage its Global Network, improving productivity and reducing networking costs.

CUSTOMER SUCCESS STORY

Customer: NGO

Field: International Humanitarian Agency

Service: SkyVision Optimize

Challenges and Objectives

An NGO required a solution that would smoothly incorporate its existing worldwide network while cost-effectively expanding and improving its communications infrastructure

Why SkyVision?

- Reliability
- Flexible, cost-effective, incremental solution
- Excellent customer support
- Fully-managed network with content control

Global Needs and Global Solutions

With worldwide operations, it was obvious that the NGO required a reliable, secure, and easily expanded communications infrastructure. The NGO chose SkyVision Optimize as the solution for its global network.

SkyVision Optimize offers dedicated capacity from SkyVision VSAT hubs. VSAT network managers can share the bandwidth of one network among multiple sites, giving them full control over the bandwidth used at each site. SkyVision Optimize is available on both C-Band and Ku-Band over Africa, the Middle East and Asia.

With SkyVision Optimize, the NGO can now dynamically manage the bandwidth of its network spanning over 20 global sites from one head office.

The advanced technology behind SkyVision's solution offers significantly increased flexibility and enables broad management control throughout the world.

SkyVision's connectivity solution employs a single common VSAT-based network to provide the NGO with high-quality network performance and reliability.

Secure Content Filtering

Running on a single, unified platform with coverage spanning three continents, SkyVision's value-added solution includes a fully-managed firewall and dynamic content filtering management throughout the network. These features increase productivity to fully meet the demanding requirements of NGO.

“We required a first-class, reliable vendor that could seamlessly build on our existing system, while having the ability to expand it, on demand. SkyVision acted quickly and responded to all of our demands. With the flexible management of the firewall and content filtering solution we are now able to offer a greater user experience in addition to superior reliability, ensuring only the content relevant to our users is delivered. We can now respond to changing requirements per site, such as in emergency situations or temporary increased demand for capacity in real-time. This is a huge leap forward for the NGO and one that the communities we serve will definitely benefit from.”
