Challenges and Objectives
- Reliable Internet for ICT centers within university campuses
- Stay within budget
- Solution compatible with existing equipment

Why SkyVision?
- High quality service
- Excellent Support
- Competitive pricing
- No CAPEX required

SkyVision Advantage

SkyVision Advantage is a satellite-based solution specifically designed to provide high quality Internet connectivity to remote locations using dedicated bandwidth.

SkyVision Advantage uses a unique combination of award winning iDirect technology, powerful satellites and weather-resistant C-Band frequencies to ensure reliable Internet access to even the remotest areas.

SkyVision Advantage supports a variety of applications, including: File Transfer Protocol (FTP), Videoconferencing and Voice over IP (VoIP). Easy to install and offering real-time traffic management by a team of expert IP engineers via local customer support centers, it also provides first-line diagnosis 24 hours a day, 7 days a week.

Solution for ICT Institution

The ICT Institution required low cost, reliable, high quality Internet connectivity for a total of five different ITC centers located at different universities throughout Nigeria.

The solution would need to be fast and easy to install, run on existing equipment and provide superior service even in the remotest of areas.

SkyVision's Advantage solution provided the ICT Institution with all of the above requirements in addition to flexible payment options with zero CAPEX investment and 24/7 support.

Since the deployment of SkyVision Advantage, students in each of the five universities

> "SkyVision tailored their service to match our needs precisely, and the solution fits like a glove."
> - CEO of ICT Institution

throughout Nigeria enjoy full internet connectivity on campus, as and when they need it.
